

DV Soft Healthcare

From the front desk to the lab to the invoice, on one system

Hospital management for clinics, nursing homes and hospitals: patients, appointments, prescriptions, pharmacy, laboratory, wards, theatre and billing in one system. Hosted for you with a database of your own, or run on your own server.

28

Modules in seven groups,
from registration to payroll

7

Staff roles, with access
checked on every page

AES-256

Encryption on medical history,
allergies and lab results

14 days

Free trial on the hosted plans

OVERVIEW

From the front desk to the lab to the invoice, **on one system**

DV Soft Healthcare runs a hospital from the front desk to the laboratory to the invoice. Reception registers patients, books appointments and runs the daily OPD token queue. Doctors write prescriptions that are checked against the patient's recorded allergies and common drug interactions as they are written. Nurses record vitals and give doses from a drug chart timed to the ward's rounds. The laboratory, pharmacy, wards, operation theatre, blood bank and accounts work on the same patient record.

Billing follows the work. Pharmacy dispensing raises its invoice as it is dispensed, and ward stays, completed lab tests and theatre procedures raise theirs on completion. The revenue-leakage report lists work that was done and never invoiced. A lab result is entered by one person and released by another, critical values stay in view until somebody records who was told, and invoices are corrected through credit notes and write-offs that keep the original amount and the reason.

The same software runs two ways. Hosted for you, each hospital gets a workspace at its own address with its own name and logo, and its records are kept in a database of their own. On your own server, it runs inside your network with no internet connection at all, and supports several branches for hospital groups. Medical history, allergies and lab results are encrypted at rest with AES-256-GCM, and every entry in the activity log is signed so that tampering with it shows.

WHO IT IS FOR

Clinics and nursing homes

Single sites of around 10 to 50 beds, often run by an owner-doctor. Appointments, the OPD queue, prescriptions, the pharmacy and billing, hosted for you with published prices.

Mid-size hospitals

Around 50 to 200 beds, with an administrator and an IT team. Inpatient, theatre, laboratory and analytics, with invoices raised from completed work and a signed audit trail.

Diagnostic centres and polyclinics

A laboratory where one person enters a result and another releases it, critical values stay in view until the call is recorded, and patients see only what has been released.

Hospital groups

Several sites on one system. The self-hosted edition runs on your own servers, keeps branches apart with a consolidated view across them, and the data stays with you.

Billed To: Suresh Kumar (PT-MAIN-2026-0001)

+91 98450 12345

#	Description	Qty	Unit Price	Amount
1	Consultation - Dr. Rahul Verma	1	₹500.00	₹500.00
2	HbA1c	1	₹550.00	₹550.00
Subtotal				₹1,050.00
Total				₹1,050.00
Paid (cash)				₹500.00
Balance Due				₹550.00

Credit or write off

Reduces what this invoice asks for, without deleting it. The original amount, the reason and who issued it stay on the record and print on the bill. It does not move money - if a patient is owed a refund, that is handled where the payment was taken.

Clear invoices with credit notes

KEY FEATURES

Built for the way **you actually work.**01 **Billing that follows the work**

Pharmacy dispensing raises its invoice as it is dispensed, on every plan. Ward stays, completed lab tests and theatre procedures raise theirs on completion, and the revenue-leakage report lists work that was done and never invoiced (Professional plan).

02 **Allergy checks that understand drug classes**

A recorded penicillin allergy warns when amoxicillin is prescribed, and cephalosporins warn as a possible cross-reaction. Warnings never block: the prescriber types a reason and it is kept with the prescription.

03 **Lab results released by a second person**

The person who enters a result cannot release it. It stays provisional, and out of the patient portal, until somebody else has checked it. A corrected result keeps the old value and reads as amended (Professional plan).

04 **Critical values that stay in view**

Each test can carry critical low and high figures set by your laboratory. A result beyond them is flagged on entry, shown in red, and listed above the verification queue until somebody records by name who they told.

05 **Invoices corrected in the open**

An invoice cannot be edited. An administrator or the accountant issues a credit note or a write-off instead, never the receptionist, and the original amount, the reason and who issued it are kept and printed on the bill.

06 **An audit trail that shows tampering**

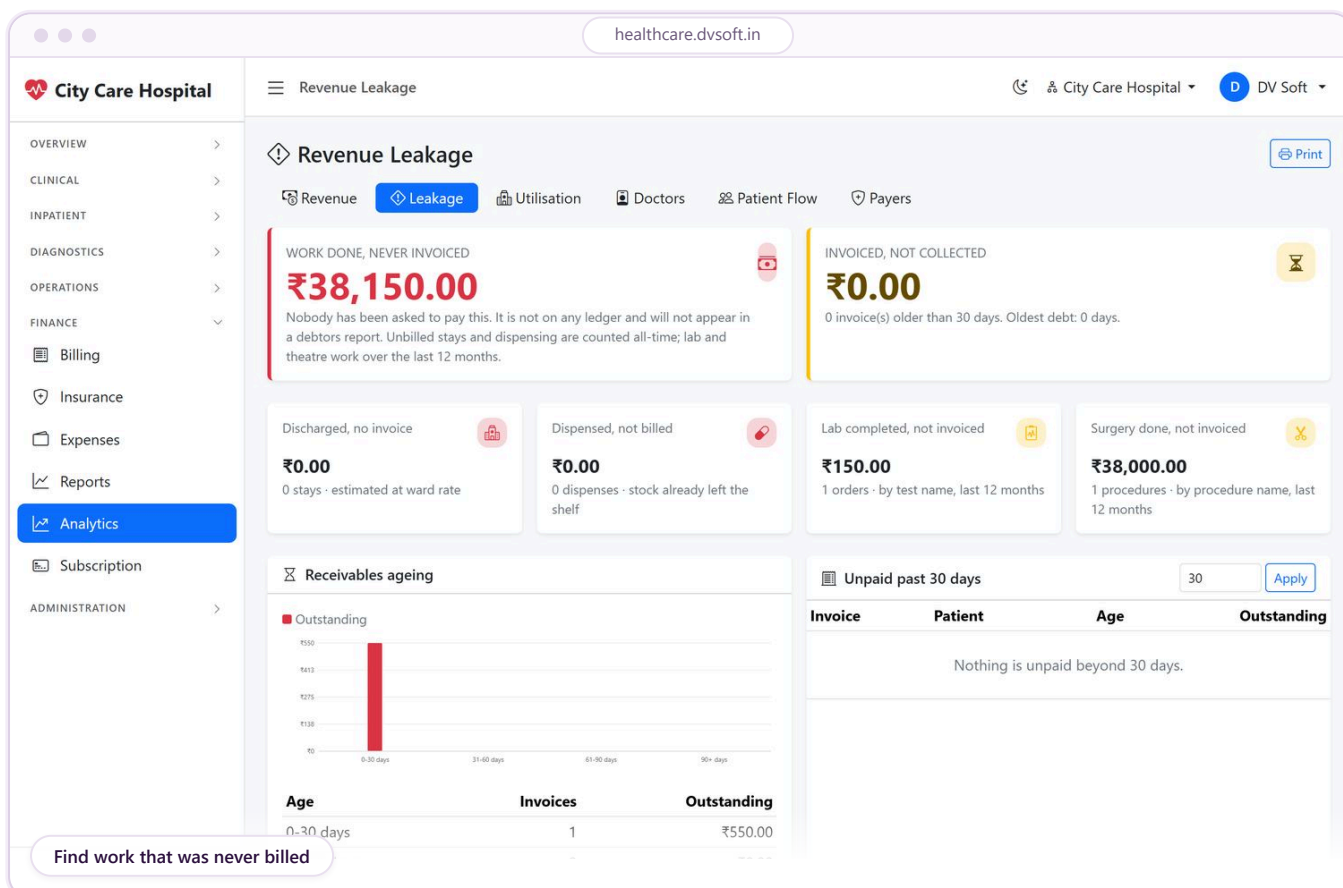

Every entry in the activity log is signed. Editing, forging, renumbering or deleting entries is detectable, and sign-ins, failed sign-ins and billing exports are recorded in the same log.

07 **A patient portal on every plan**

Patients sign in at your hospital's own address to see their appointments, prescriptions, released lab results and invoices, and to book appointments online.

08 **Your own database, encrypted fields**

On the hosted edition each hospital's records live in their own database. Medical history, allergies and lab results are encrypted with AES-256-GCM, staff can use two-factor sign-in, and seven roles are checked on every page.

MODULES

Everything in **one system.**

■ Clinical

Patients, appointments that refuse a double booking, prescriptions with ICD-10 diagnosis codes, vitals, the daily OPD token queue, progress notes, patient documents, and Health ID and consent (ABHA, India only).

■ Inpatient

Admissions with a drug chart timed to ward rounds and a printable discharge summary, wards and beds, operation theatre scheduling that refuses overlapping bookings, and birth and death registers.

■ Diagnostics

The laboratory catalogue, orders and two-person result release, and a blood bank with donors and stock by blood group.

■ Pharmacy & stores

Pharmacy stock with reorder levels and expiry warnings 90 days ahead, dispensing against a prescription or at the counter, suppliers and purchase orders, and an equipment register with service history.

■ Finance

Billing and invoices with part payments, insurers, TPAs, policies and claims, expenses by category, reports, and analytics with the revenue-leakage report and payer ageing.

■ People

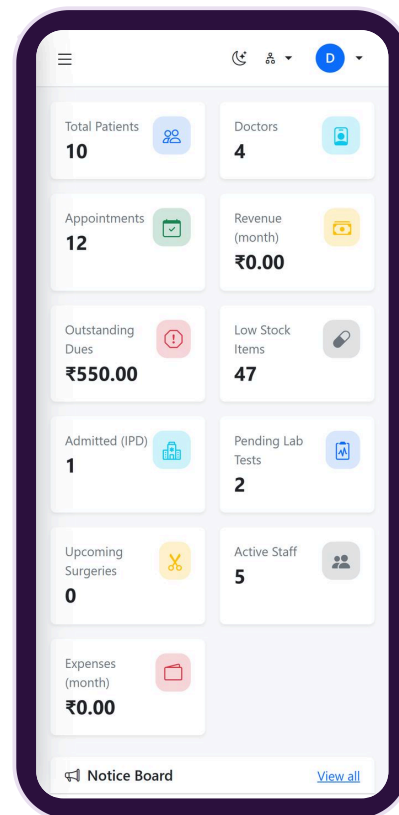

Monthly payroll with printable payslips, named shifts, a weekly duty roster and leave requests approved by an administrator.

■ Operations

The ambulance fleet and its calls, patient feedback by service, and an outgoing message queue ready for your SMS provider.

■ On every plan

Dashboard, notice board, doctors, staff, departments, users and roles, settings, the activity log, subscription and billing, and the patient portal.

QUESTIONS BUYERS ASK

Can we run it on our own server?

Yes. The self-hosted edition runs on your hardware, inside your network, with no internet connection at all, and supports several branches. It needs PHP 8.1 or newer, MySQL 5.7+ or MariaDB 10.3+, and Apache or nginx. It is priced per installation.

Does the allergy check stop a prescription?

No. It warns and never blocks: the prescriber records a reason and it is kept with the prescription. The built-in rules are a starter set of 40 common interactions and 66 drug-class mappings, and can be extended with a licensed drug database.

What happens if we outgrow our plan?

A single-site hospital that needs more staff logins or patient records does not have to change plan: the limits are raised on the plan it already has and priced case by case. Several sites run on the self-hosted edition.

PLANS & GETTING STARTED

Choose a plan. **We set it up for you.**

Starter

For clinics: the outpatient day, the pharmacy and billing, hosted for you.

₹2,999

per month · ₹29,990 a year

- ✓ 10 staff logins, 2,000 patient records, 1 site
- ✓ 12 of 28 modules
- ✓ Patients, appointments, prescriptions, vitals, OPD queue, progress notes and patient documents
- ✓ Pharmacy stock, dispensing, billing, reports and feedback
- ✓ Prescribing checks and the patient portal included
- ✓ 14-day free trial; pay yearly and get 2 months free

EVERY MODULE

Professional

For nursing homes and hospitals: every module, hosted for you.

₹7,999

per month · ₹79,990 a year

- ✓ 40 staff logins, 20,000 patient records, 1 site
- ✓ All 28 modules, including inpatient, theatre, laboratory and blood bank
- ✓ Two-person lab result release and critical-value handling
- ✓ Analytics with the revenue-leakage report
- ✓ Insurance, expenses, payroll, duty roster and leave
- ✓ FHIR R4 patient export and ABHA-ready consent (India)
- ✓ 14-day free trial; pay yearly and get 2 months free

Self-hosted

For hospital groups, or any hospital that wants the system on its own server.

On request

Quoted for your size

- ✓ Runs on your hardware, inside your network
- ✓ Works with no internet connection
- ✓ Several branches, with a consolidated view across them
- ✓ Branches, users and modules agreed in your quote
- ✓ Backups: a plain MySQL dump plus your uploaded documents
- ✓ PHP 8.1+, MySQL 5.7+ or MariaDB 10.3+, Apache or nginx

Taxes extra where applicable. Your product is ready within 6 to 24 hours of payment.

1

Book a demo

See the front desk, prescribing, the laboratory, the pharmacy and billing on a call, with your own questions, and choose between the hosted edition and your own server.

2

A dedicated DV Soft team sets it up

Your workspace at your-hospital.healthcare.dvsoft.in or a domain of your own, with your hospital's name and logo, departments, doctors, staff accounts and the modules your plan includes.

3

Training for every role

Doctors, nurses, reception, laboratory, pharmacy and accounts each learn the screens their role uses, and your patients are shown the portal.

4

Go live, with 24/7 support

Your team starts registering patients, prescribing and billing on day one, with the DV Soft team on call around the clock.

**A dedicated team**

One team from the first call to go-live and beyond.

**Live in 6 to 24 hours**

Set up for you after payment, with your data moved in.

**Training included**

Hands-on sessions for every role until staff are confident.

**24/7 support**

Phone and WhatsApp, during and after go-live.
